### Description

A traditional, white, fluffy, two-dimensional, lightweight flake. An eco alternative to our standard Globe Snow.

Both the bag and its contents are PLA (Polylactic Acid) based. PLA is biodegradable and made from renewable resources, in this case non-GMO corn.

It is non-allergic and will not become toxic if accidentally swallowed

Normally used indoors as a snow dressing material, Eco Snow has been tested by the Danish Institute of Fire and Security Technology, achieving the Danish fire certification: BS 5852:1990

Eco Snow designed for use in JBL Snow Globes also be used for simulating a romantic and very slow falling snow. Light and easily introduced using any air/blower moving device or dropped from above, Eco Snow is versatile and simple to use.

Suitable for home composting or inclusion in garden waste collections.

### Storage

As this product is plant-based, certain conditions will accelerate its decomposition. To prolong the life of this product store in a cool, dark, dry place.
